

Nathan Ogle, AIA: *Advancing Our Vision in California*

AIA California | Candidate for Vice President of Strategic Planning & Research 2022-2023

Summary of My Background, Education, Work and Service

As an architect first, my career has focused on local and global practice of strategic planning, management and construction of city government, aviation, higher education and housing projects throughout California and North America. Through rigorous analysis, collaboration, and careful listening to all stakeholders, I create strong partnerships, teams, and trust; while crafting lasting city master plans, future forward campus growth solutions, and affordable community housing outcomes.

I have appreciated the opportunity to advance our profession through leadership roles on the local AIASF Chapter’s Center for Architecture & Design Capital Campaign Task Force; Finance Committee and Mentorship Programming; and while serving on the National KC Regional & Urban Design Committee Advisory Group organizing and moderating smart city symposium programming for AIAU. As an AIACA Urban Design Committee member, I have been instrumental in organizing the town hall series and providing insightful legislation review and analysis.

My Philosophy, Goals and Objectives in Continuing Work for AIA California

I am prepared as the next Vice President of Strategic Planning & Research to update and renew strategies for promoting resilient, sustainable, equitable, diverse, and inclusive strategies in practice, sustainability, and learning. Starting from my beginning in the San Francisco Bay Area over 30 years ago, I have devoted my career to large strategic planning and team building in corporate and community settings. My private sector experience in the business of design, risk management, negotiation, firm management, sustainability, and contracts gives me a strong foundation and understanding of our next steps for how we live, work, play and learn with smart technology awareness in our communications; to advance and promote all subject matter expertise in the profession.

I am especially grateful to inspire pre-college, undergraduate and graduate level architecture students located around the world as an instructor in the only NAAB accredited fully online architecture degree program existing today. Hearing firsthand what the next chapter of thinkers and doers prioritize on their journey as they look to the future in state and nation.

I look forward to continuing my work with each of you, our chapters, and members as we identify, measure, and create actionable outcomes that will influence the success of a new generation.
